| Cardiac Arrhythmia - page 105                                                                      | Change 2 <sup>nd</sup> to last paragraph that starts with Supra Ventricular tachycardia to: Fetal tachycardia is a sustained heart rate over 160 bpm. Sustained tachycardia does not allow the ventricles to fill properly and will result in a decrease in cardiac output. The most common causes of fetal tachycardia are maternal fever, maternal drug use, hyperthyroidism and hyperemia. It is therefore important the diagnosis of tachycardia in the fetus directs the nurse to do a targeted assessment on the mother. |
